While we will obviously get the final episodes of the season sooner or later, I'm unsure if they will be airing at the same time as the DVD release. There are many unanswered questions at the end of the season - most of them involving the missing footage. These haven't even been answered in the manga (and probably never will) but that's the sort of thing I'm getting at here. So, where to go from here? It'll probably be more jarring, yet easier to watch, to start from the beginning again. That's

something I've been wanting to do for a while, as well. Which episode did you start with? I really like the way the "real" timeline begins with the mother getting shot in the hospital. It's exactly what happens in my timeline, but in the ending I see Aiko just suddenly up and shot and then I see her get up and shoot her mother, even though Aiko doesn't even know that she's been shot (which is what Hiraoka implies in the ep about I think). I agree with the idea that the mother-shot scene seems to be a little rushed, but what really gets me is that the doctor here, who is introduced later in the episode as having been the one who shot her mother, seems to be shot before he even has a chance to react, which sort of makes his presence in the story at this point sort of weird and superfluous. The doctor is still floating in

space when Aiko pops her head into the room and shoots her, which is why she doesn't see him and at the very least, doesn't say anything to the police about him being in the room when she was there. Aiko never knows that her mother has been shot, either. In the ending, she's heard the shot, but she thinks it was a gun going off because of a bee in the room. Later, when Aiko does find out that her mother has been shot, she gets attacked by the mother's other relative, a1d647c40b

Q: Want to to find values from a Python dictionary that has two values I am using Python2.7 I have a dictionary and want to print all the values that have two different values. d={} d[key] = value1,value2,value3 I am thinking of using a

list comprehension. d[key].values() But this is not working for my purpose. So I am looking for a solution where the values can be in the same order as key=value1,value2,value3, Expected Output value1 value2 value3 A: You may use: d = {'a':1,'b':2, 'c':3} d.itervalues().sort() # d.itervalues() # gives a list of elements Q: Is there a way to get visual studio to automatically close an active window when a project closes? Is there a way to get visual studio to automatically close an active window when a project closes? I have the view collapse settings set to false, but each time I close my project, the window is still open. I need it to go away automatically. A: A click on the tab (as opposed to the mini-view) of the project window which opens it will usually close the tab. Also, depending on your version of Visual Studio, there is an

option within the project properties to'remember last viewed project' which, if checked, causes it to stay open for the duration of the project. /* * This file is part of the Symfony package. * *
